

Matt Black multi-fuel Huntingdon 28 with clear door burning logs.

CAST IRON

Huntingdon 28

With Gothic door mouldings complemented by reeded side panels, the Huntingdon 28 is an elegant piece of furniture in its own right. Ablaze, the very latest advances in stove design technology allow you to enjoy the movement of the flames to the full; especially as you can precisely adjust the flame picture via dual air controls.

Key Facts

High efficiency	up to 82%
Multi-fuel (with external riddling)	✓
Tracery or clear door versions (matt black)	✓
Ashpan	✓
Cleanburn	✓
Airwash	✓
Concealed handles & hinges	✓
Maximum heat output	6kW
Maximum log length	12" (300mm)
Boiler option	✗
Flue outlet	5" top or rear
Matching flue pipe in five colours	✓

Cast iron stoves

Wood and multi-fuel

Every stove in this section is manufactured from cast iron. This is the traditional way of making premium quality stoves due to the way cast iron diffuses heat. Another advantage is that the iron can be cast more thickly in areas where greater strength is needed. It also has sculptural qualities, allowing attractive designs to be cast into the stove panels.

Airtight Construction

All Stovax stove doors, except the Regency, have airtight seals which permit airflows to be precisely controlled. This allows both the heat output and refuelling frequency to be varied and helps maximise burning efficiency.

Perfect Flame Control

The triple air system in certain stoves also allows complete control of the flame picture. From a deep glow, with minimal flames, it takes only a few seconds to fill the firebox with swirling flames from the fuel and jets of flame from the Cleanburn ports.

Enamel Stoves

Enamel is a very thin coating of coloured glass which is fired at over 800°C on to a metal surface. To achieve its translucent and lustrous finish, each casting is especially designed for enamelling and is coated and fired twice. Enamel is an option on many stoves, and available in the three colours shown opposite.

Triple Air Systems (Cleanburn technology)

Several Stovax stoves incorporate triple air systems to provide a cleaner burn, greater thermal efficiency and control of the flame picture as follows:

- 1 Airwash air is drawn down over the inside of the window to keep the glass clean and clear. It is also used as primary combustion air when burning wood.
- 2 Primary air for use with solid fuel, also used to start wood fires but not normally used once a wood fire is burning.
- 3 Cleanburn secondary air is pre-heated as it passes through a heat exchanger chamber within the firebox. It is then drawn into the smokestream, where it combusts unburnt hydrocarbons to provide a cleaner burn and greater thermal efficiency.
