

Midnight Blue Brunel 3CB burning logs.

CAST IRON Brunel 3CB

The largest stove in the Brunel range, the 3CB has an extensive window through which you can take pleasure from the swirling flames of the Stovax Cleanburn System. Again, this stove incorporates all of Stovax's state-of-the-art technical features such as the stainless steel baffle. Furthermore, with full multi-fuel capability and external riddling, the Brunel 3CB generates up to 7kW of heat for you to enjoy.

Key Facts

High efficiency	up to 83%
Multi-fuel (with external riddling)	✓
Ashpan	✓
Cleanburn (with stainless steel heat exchanger)	✓
Airwash	✓
Maximum heat output	7kW
Maximum log length	15 3/4" (400mm)
Longer leg option	✓
Boiler option	✗
Flue outlet	6" top or rear
Matching flue pipe in four colours	✓

Cast iron stoves

Wood and multi-fuel

Every stove in this section is manufactured from cast iron. This is the traditional way of making premium quality stoves due to the way cast iron diffuses heat. Another advantage is that the iron can be cast more thickly in areas where greater strength is needed. It also has sculptural qualities, allowing attractive designs to be cast into the stove panels.

Airtight Construction

All Stovax stove doors, except the Regency, have airtight seals which permit airflows to be precisely controlled. This allows both the heat output and refuelling frequency to be varied and helps maximise burning efficiency.

Perfect Flame Control

The triple air system in certain stoves also allows complete control of the flame picture. From a deep glow, with minimal flames, it takes only a few seconds to fill the firebox with swirling flames from the fuel and jets of flame from the Cleanburn ports.

Enamel Stoves

Enamel is a very thin coating of coloured glass which is fired at over 800°C on to a metal surface. To achieve its translucent and lustrous finish, each casting is especially designed for enamelling and is coated and fired twice. Enamel is an option on many stoves, and available in the three colours shown opposite.

Triple Air Systems (Cleanburn technology)

Several Stovax stoves incorporate triple air systems to provide a cleaner burn, greater thermal efficiency and control of the flame picture as follows:

- 1 Airwash air is drawn down over the inside of the window to keep the glass clean and clear. It is also used as primary combustion air when burning wood.
- 2 Primary air for use with solid fuel, also used to start wood fires but not normally used once a wood fire is burning.
- 3 Cleanburn secondary air is pre-heated as it passes through a heat exchanger chamber within the firebox. It is then drawn into the smokestream, where it combusts unburnt hydrocarbons to provide a cleaner burn and greater thermal efficiency.
